Why What

Hybrid overview

1. AD health check
2. Hybrid identity with Azure AD Connect
3. Hybrid Azure AD join of Windows 10 machines
4. Exchange hybrid
5. Exchange hybrid modern authentication
6. Skype for Business hybrid
7. Skype for Business hybrid modern authentication
8. What type of licenses to use

1. AD Health check

Validates that local AD and settings are cloud ready

Use Idfix to scan for unsupported attributes

Use scripts to validate UPN vs primarysmt vs sipaddress

Goal is to find blockers and create a plan to fix before we start implementation

Reverse Proxy

Skype for Business Edge

Active Directory

Exchange Server 2016

Skype for Business Server 2015

2. Hybrid identity with Azure AD Connect

One server in local network
A service that signs in to Azure AD
Syncs users and attributes out to Azure AD
Can enable features such as password sync, password write back
Can enable **weak password elimination** on-premises and password protection (AADP2)
Best practice is to use **cloud native authentication** for signing in to cloud services

Syncing of users
Password hash of the hash

Reverse Proxy

Skype for Business Edge

Active Directory

Azure AD Connect

Exchange Server 2016

Skype for Business Server 2015

3. Hybrid Azure AD join of Windows 10 machines

Is required for hybrid modern authentication

Enabled SSO from a Windows 10 machine to

Enables hybrid Azure AD
join of Windows 10 1709 or newer

Reverse Proxy

Skype for Business Edge

Active Directory

Azure AD Connect

Exchange Server 2016

Skype for Business Server 2015

4. Exchange hybrid

Is required for hybrid modern authentication
Enables ability to mix users online and on-premises
Enables use of Exchange Online protection
Enables use of Office 365 advanced threat protection for online users
(safe links, safe attachments)

Exchange Autodiscover
Exchange Web services
Exchange ActiveSync

Inbound SMTP
Requires public ip and public cert
Port 25, encrypted, no inspection

Exch hybrid
SMTP outbound

Reverse Proxy

Skype for Business Edge

Active Directory

Azure AD Connect

Exchange Server 2016

Skype for Business Server 2015

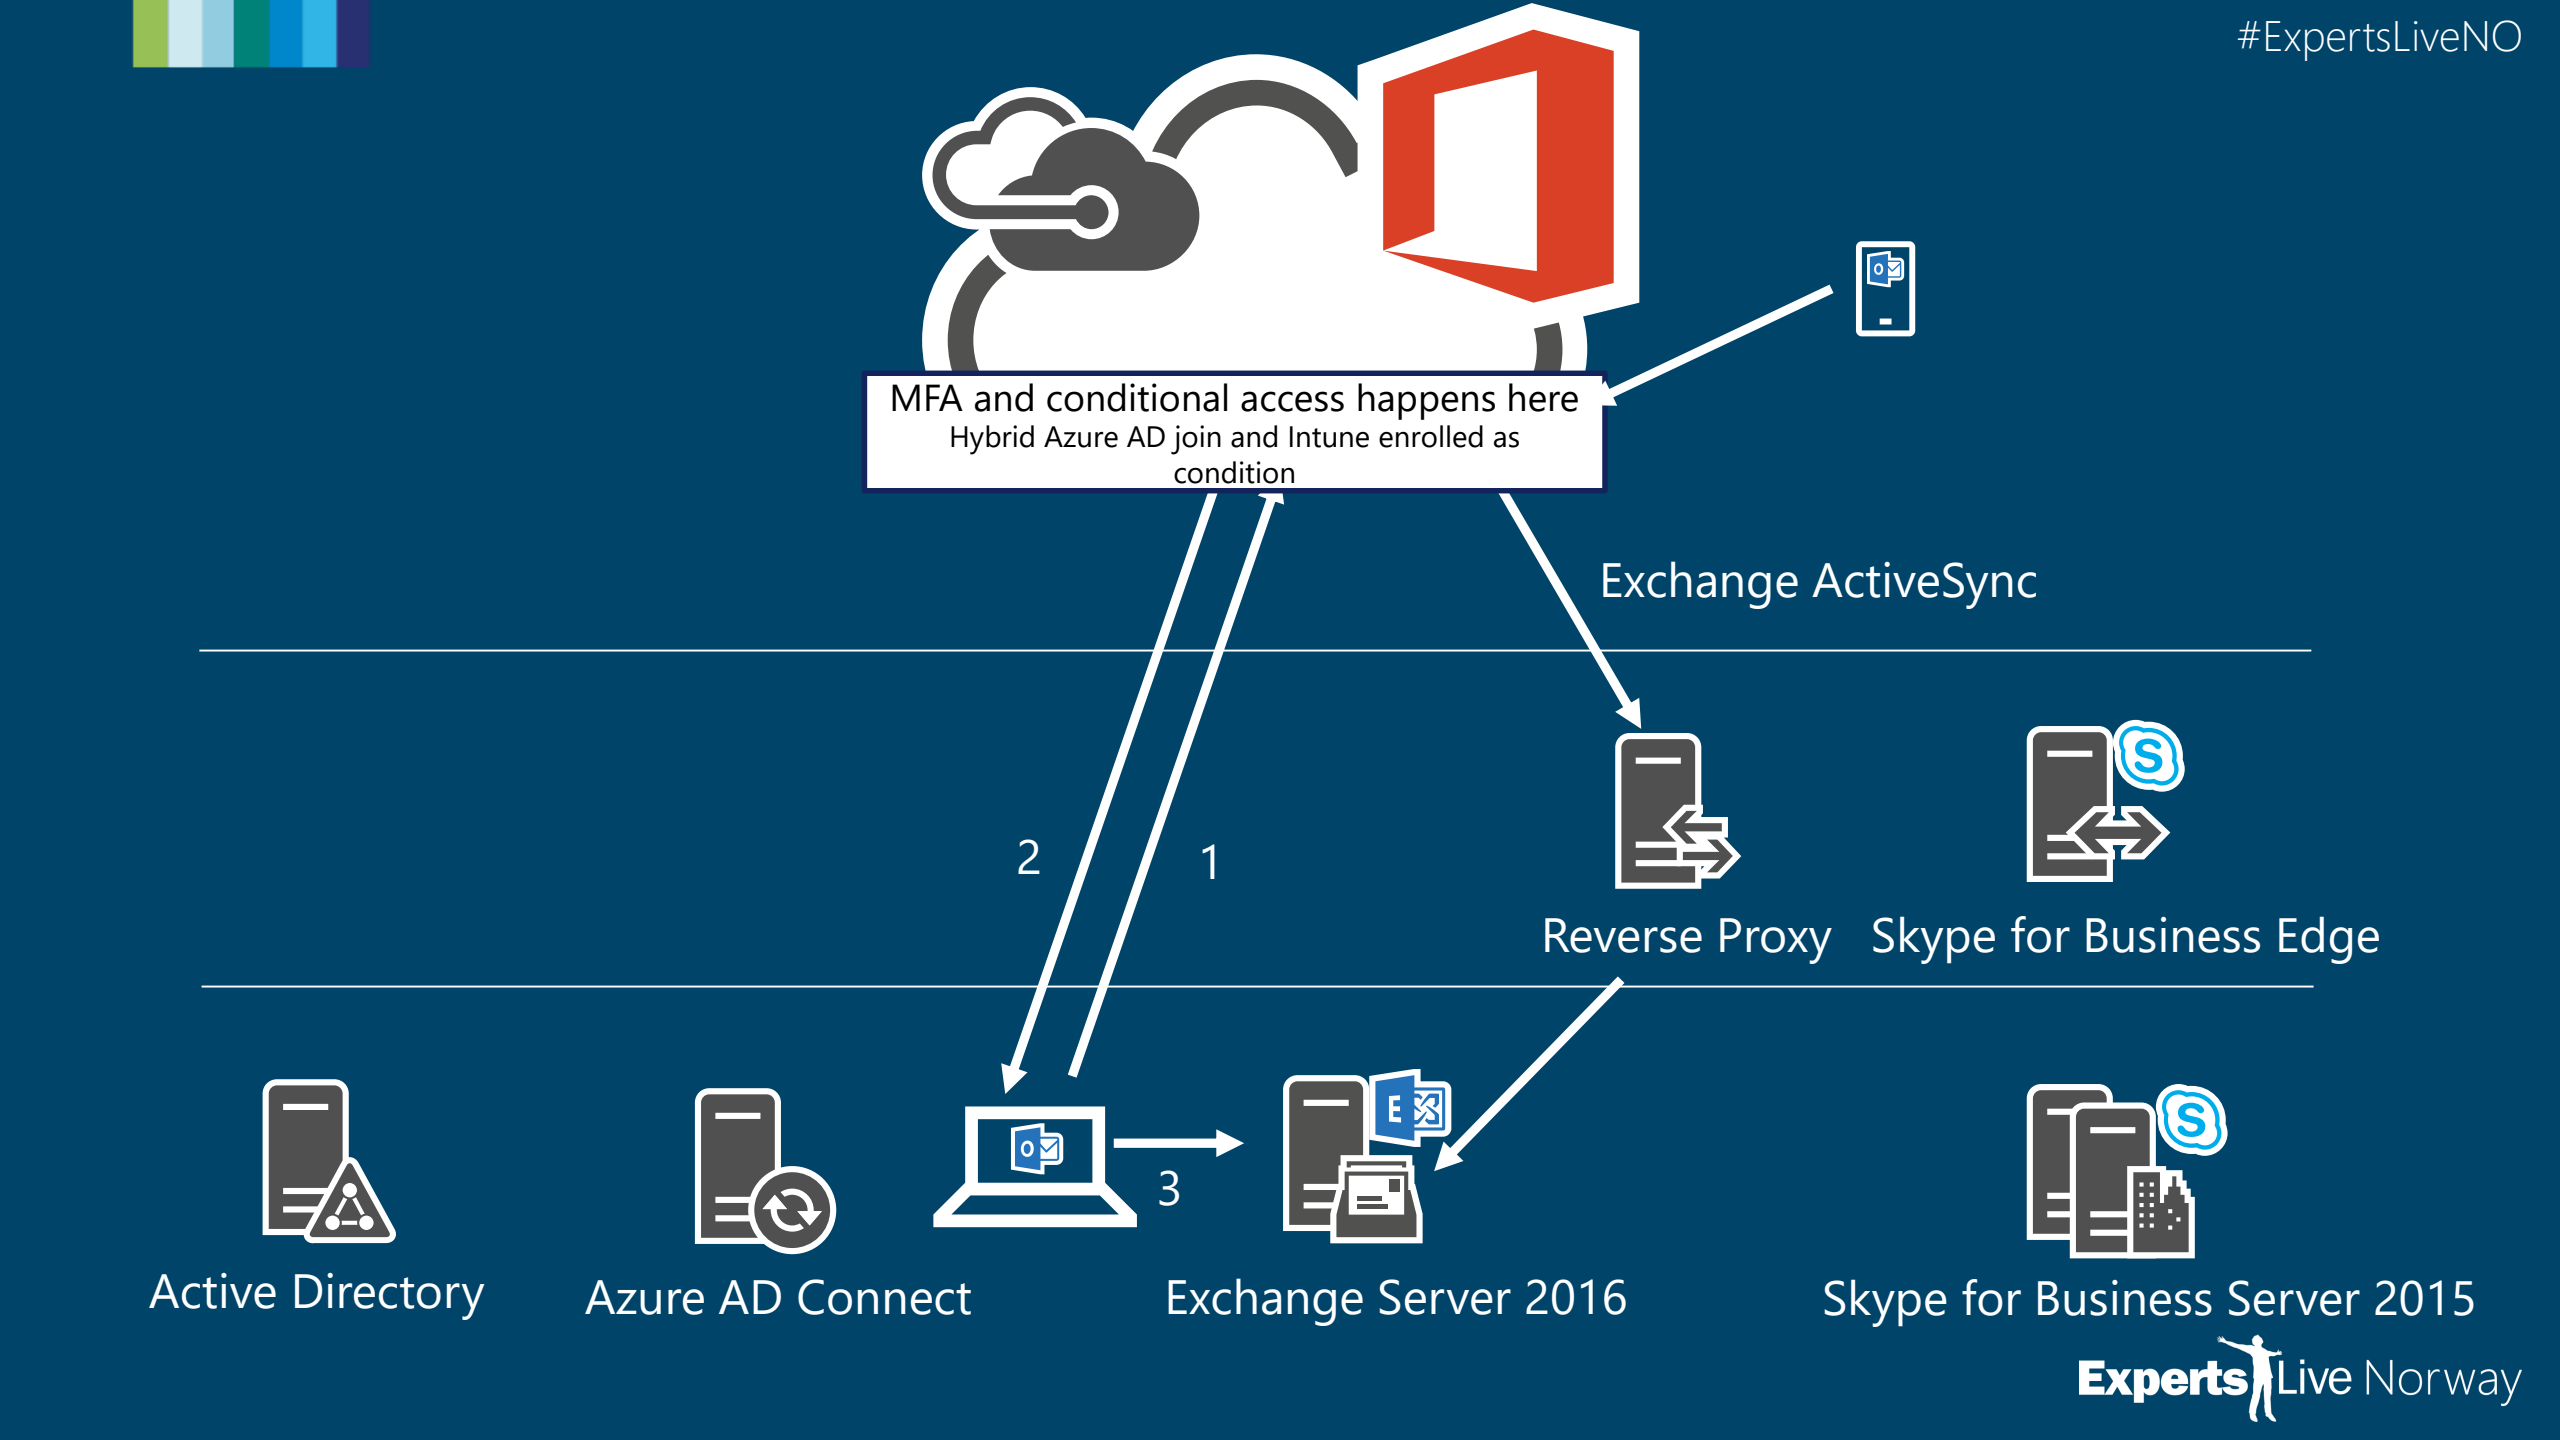
5. Exchange hybrid modern authentication

Enables use of **Outlook Mobile for on-premises users** with modern authentication
We can disable basic authentication on-premises
We can limit all external exchange connectivity to Microsoft only IP addresses

With EMS license you can implement multifactor authentication
With EMS license you can implement conditional access
With EMS E5 license you can implement risk based conditional access



MFA and conditional access happens here
Hybrid Azure AD join and Intune enrolled as condition
Exchange ActiveSync

Active Directory

Azure AD Connect

Exchange Server 2016

Skype for Business Server 2015

6. Skype for Business hybrid

Enables shared namespace online and on-premises

Enables hybrid voice for SfBO users

Is required for hybrid modern authentication

DNS points on-premises

Uses existing federation records

Reverse Proxy

Public nic must use public dns

8. What type of licenses to use

Enterprise vs open vs CSP

- In order to enable users for hybrid you need
  - Office 365 tenant
  - Exchange Online for exchange hybrid
  - Skype for Business Online for Skype for Business hybrid
  - Azure AD P1 for conditional access
- Microsoft 365 E3 is recommended
  - Need security add-on for Advanced Threat Protection
- CSP does not give on-premises use rights
  - Is the most flexible for scale and change
  - You do get SCCM license
